

Financing the post-2015 sustainable development agenda?

Shari Spiegel
Financing for Development Office

United Nations
October 21st, 2013

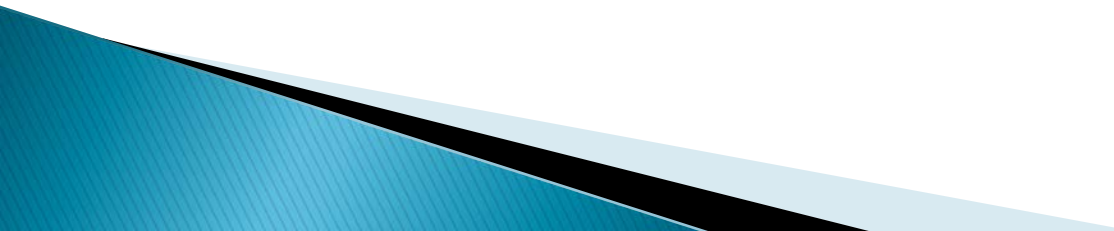

The Monterrey Consensus and Doha Declaration provide a strong foundation for a financing for a post 2015-financing strategy

- ▶ Monterrey and Doha focused on
 - Domestic and international funds
 - Public and private sources
- ▶ But there's a need to build on Monterrey and Doha to incorporate:
 - New challenges and
 - the interrelationships between the *social, economic, and environmental* dimensions of sustainable development

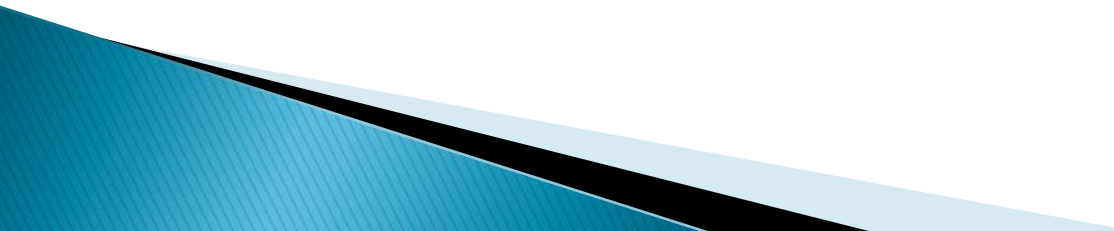

Financing needs for sustainable development are extremely large

- ▶ Difficult to measure, but all studies show that its in the order of trillions US\$ per year.
 - ▶ In particular, there are ‘gap sectors’, such as
 - Social needs
 - climate financing, the global commons (global public goods)
 - Long-term investment, including infrastructure
 - SME financing
- 

Yet *global savings* is sufficient

- ▶ \$18 trillion annually
 - ▶ Global financial assets are estimated to be around \$218 trillion
 - ▶ Challenge lies in promoting a financial system that incentivizes a reallocation of a small percentage of savings.
- 

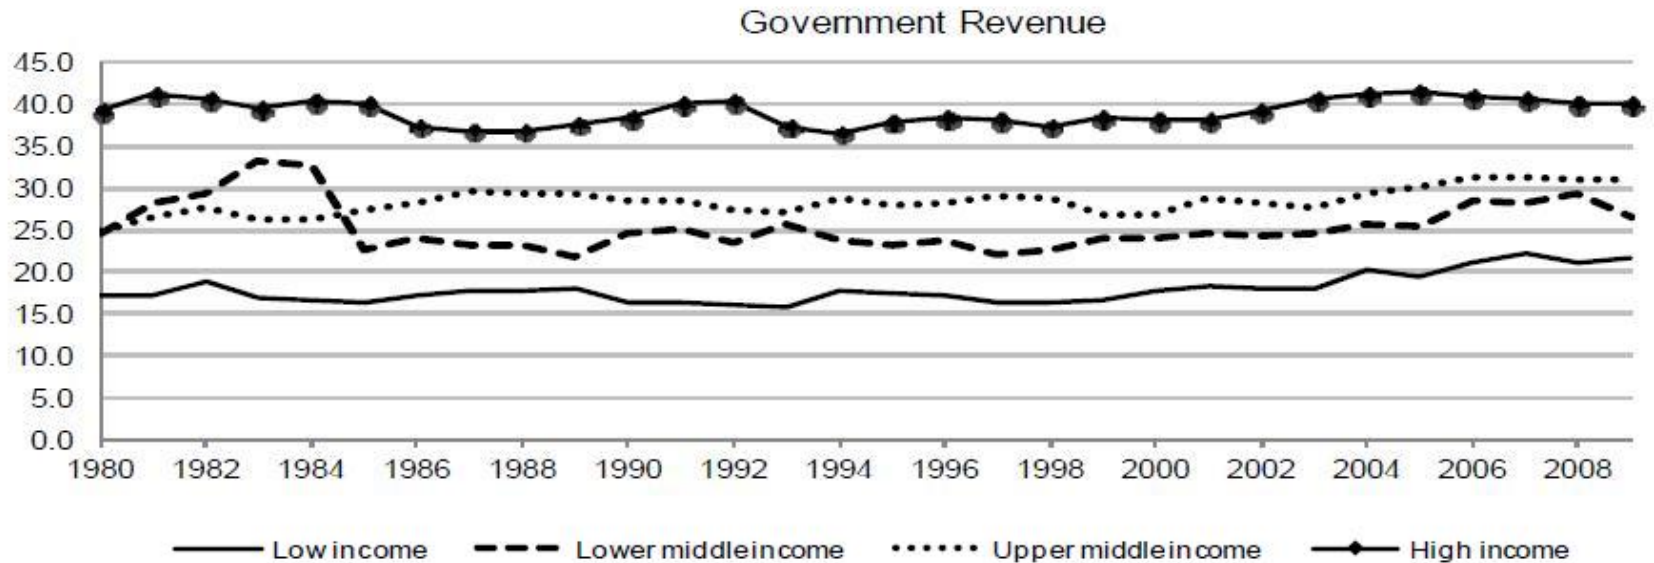

Different sources are complements

- ▶ Need public, private, domestic, and international
 - ▶ But these are complements, not substitutes
 - ▶ For example, private sector is profit oriented
 - Unlikely to invest sufficiently in social needs, global public goods, etc., where risk adjusted returns are not high
 - ▶ How to incentivize the private sector?
- 

Need to focus on underlying barriers and incentives

- ▶ Why is there an underinvestment in key areas?
 - Economic theory points to underinvestment in social issues and global public goods
 - But why is there an underinvestment in long-term investment and SMEs?
- ▶ And what is the role of the public sector?
 - Equity: reducing poverty
 - Leveraging private sector resources
- ▶ Public sector will remain the lynchpin of any financing strategy

Domestic resource mobilization is important

YET ODA FALLING IN REAL TERMS

Total bilateral aid by OECD-DAC members, in billions of US\$

ODA falling in real terms
South-south rising, but not a substitute

Private sector flows

- ▶ Expectation on institutional investors
 - 78–85 trillion USD in assets
 - Pension funds, SWF, insurance have long-term liabilities
- ▶ Long-term liabilities
- ▶ But <1% of assets in infrastructure
- ▶ Need good governance, institutions, rule of law, policy certainty, strong regulatory framework (i.e. reduce risks)
- ▶ *But insufficient financing even in developed, across a range of regulatory and policy structures*

The private sector has become extremely short-term oriented

- ▶ Volatile international capital flows
- ▶ Turnover in stocks
 - In the United States, the average holding period for stocks fell from about *8 years* in the 1960s to about *6 months* in 2010
- ▶ Commodity price volatility

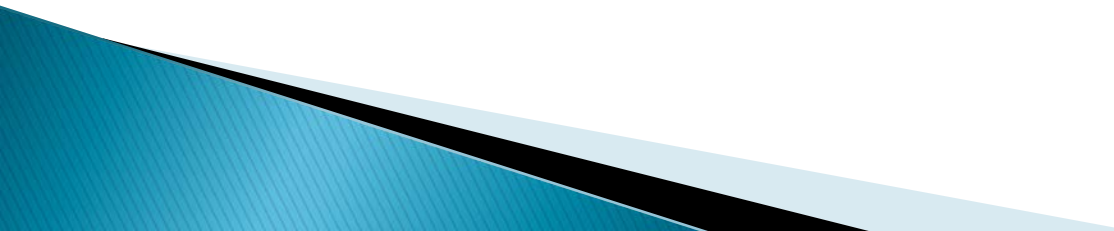

Policies

- ▶ To date focused on increasing safety and soundness of banking system;
 - E.g. Basel III, FSB
 - Which is important
- ▶ But not enough focus on access to the main goal of the financial system:
 - Intermediating credit/access to credit

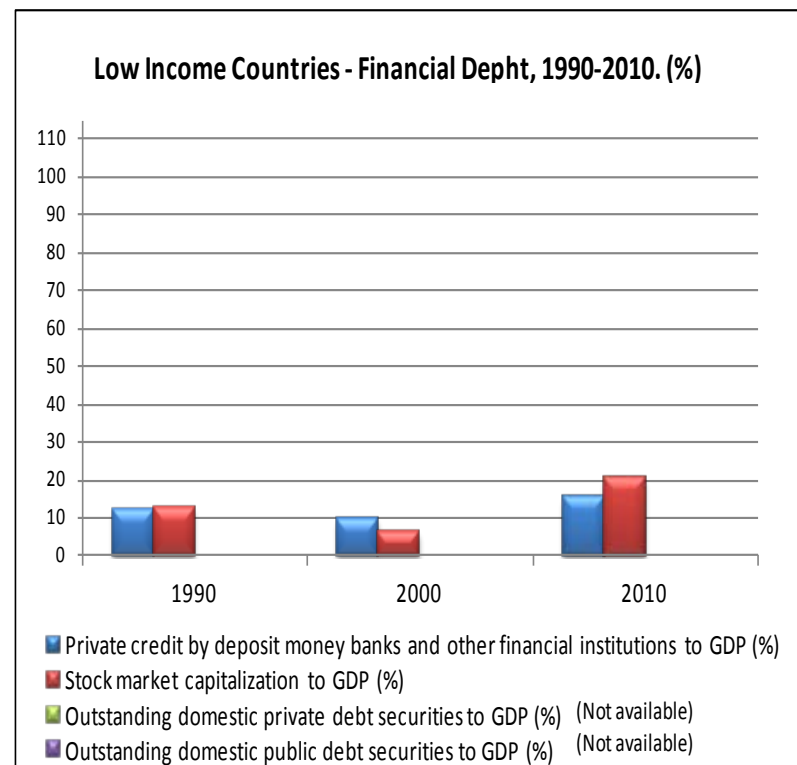

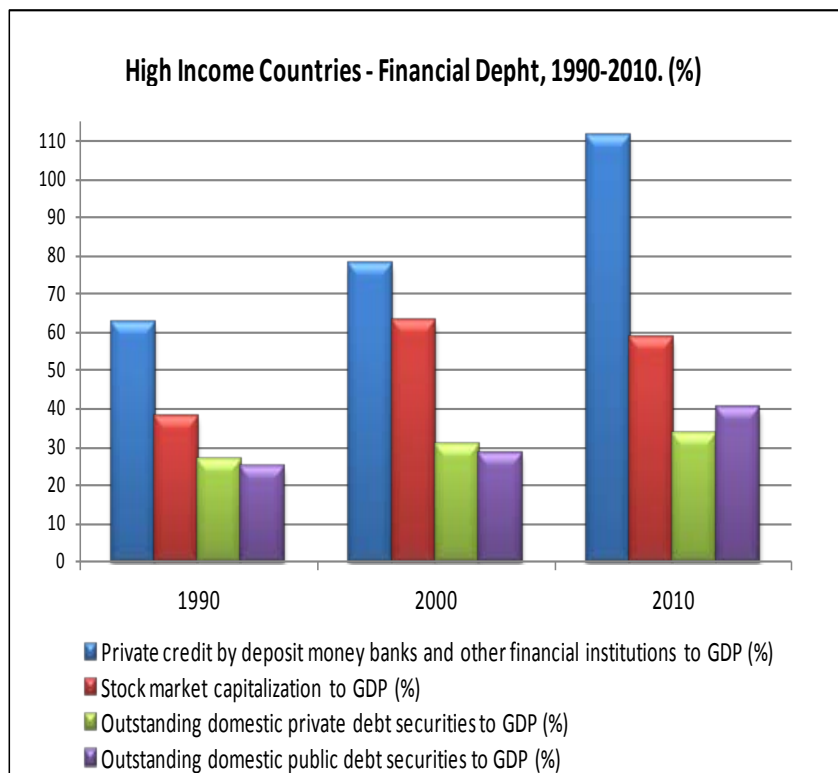

Need for multi-faceted role for public policy

- ▶ Regulations
 - Balanced regulations for both stability and access to credit
- ▶ Need to focus on changing incentives:
 - Bottom up and top down
- ▶ Reduce risks:
 - improve enabling environment
 - Major institutional change for environmental investment
- ▶ Share risks
 - PPPs

Risk sharing

- ▶ Some PPPs have been successful
 - But many have failed
 - ▶ Risk sharing should not mean public sector does not mean risk transfer
 - ▶ Need to share in upside as well as downside
 - ▶ But getting it right is incredibly difficult
 - ▶ Capacity development is crucial...
